Abstract

The impact of technology on local architecture

Holy city of Najaf hotels a model

By: Ameer hamoody Obaid

Supervised: Dr. Basim Hassan AL- Majidi

Dept. of Architecture, University of Technology, Baghdad, Iraq.

The enormous development and rapid technology, particularly in the field of telecommunications and information technology, the latest a qualitative change in the architecture, which is one of the cognitive development fields, where many of the architects look at modern technology as an ideology similar to the era of the first machine with a Altobaiah ideas that have faced many problems which have become Most of the ideas the perfect ideas unworkable, and at the end of the twentieth century, this has become the wrong ideas when I entered the most modern technology to life facilities and tissue architecture made up an important and influential in Western architecture first and second Gulf dimension of architecture.

Where given modern technology a new form of architecture different from the fashionable shape, and in spite of the occurrence of ideas and applications for the current building under assets or data of modern technological trends, but it Most often be very confusing to the fabric of the traditional city and because the patterns or technological trends which entered into the local architecture It entered the physical elements and did not intervene as patterns modified based on the requirements of the Arab community.

This paper deals with the relationship between technology and local architecture and the impact of technology transferred to local architecture and the purpose of the topic in a scientific research methodology came in five chapters:

Chapter One: The first chapter dealt with building a comprehensive data base for the most affected of search terms, but a local architecture. As well as concepts associated with the local architecture, and of professional practice, customs, traditions and regional identity which is the foundation of the local architecture, which have been addressed her to understand the formulation and its impact on the local architecture industry ..okzlk local architecture relationship to technology moving biggest local identity and understanding of their relationship in order to stand on its knowledge base to search the aim enriching the base all the way to the axis of the overall search. (Local Architecture relationship with other concepts.

Chapter Two: eat this chapter in the first pillar to ask one of the important concepts, namely "technology" which remained vague in terms of analysis and process of production and development, according to the different analytical monetary outlook affected by the literature as it was accompanied by a lot of failures in Altvsar.lzlk, this In the first chapter centered it will work to clarify the concept and its implications and its association with the local intellectual architecture.
