Programming with visual Basic:

Theoretical

2

Practical

2

Introduction to Visual Basics.

Forms and control tools.

Project explorer , properties , and events.

Make project , save it , and its applications.

Files projects and exercises.

Menus and writing menus codes.

Dialogue boxes , message boxes.

Basic elements for visual basic statements , ATA , Variables , assinment statements.

General view on assignment statement , constants and operations.

Adding astringe of variables , waking the outputs.

Control statements and If..- then statements.

If- then –els statement.

Case statement ,switch statement.

Iff , choose.

Examination.

For – next statement.

Do-while loops.

Nested. loops.

Arrays.

Arrays and loops and procedures.

Operations on arrays.

Strings.

Files.

Sequential files.

User defied type.

Random files.

Random files.

Database.

Database.
