

Physical state of matter-Perfect and real gas law	١
Motion of molecules in n verified gases- Pressure and d mean free path	٢
Transport phenomena in n viscous state- Transport phenomena in molecular state	٣
Thermal diffusion and energy transport	٤
Mechanical pumps	٥
Mechanical pumps	٦
Vapor pumps	٧
Chemical pumps	٨
Sorption-Cryo pumps	٩
Types of gauge measuring total pressure	١٠
The Mcload gauge and thermal conductivity gauge	١١
Hot and cold cathode ionization gauges	١٢
The Knudsen gauge-The viscosity gauge	١٣
The viscosity gauge-Gauge calibration	١٤
Thermal transpiration and pressure measurements	١٥
The determination of partial pressure	١٦
Evaporation process	١٧
Sputtering process	١٨
Ion plating and ion n implantation	19
CVD process-CVD reactor	20
The fundamentals of CVD-CVD reaction	21
CVD products and process routes	22
Plasma assisted CVD-Plasma enhanced CVD	23

The Pack coating-Slurry coating technique	24
-Sole-gel coating technique -Hot-dip coating technique	25
Electrochemical and chemical coating methods	26
Laser coating technology-Rapid solidification processing	27
Droplet transfer coating by spraying- Coating by plasma spraying	28
Clod surfacing-Diffusion bonding	29
Thickness measurements	30
