

Introduction-Characteristics of light	١
The quantization of energy-Region of EM spectrum	٢
Resolving power,S/N ration width of spectral lines	٣
Intensity of spectral lines, Elements of practical spectrometer	٤
Microwave spectra ,classification of molecules	٥
Rotational of rigid diatomic molecules	٦
Rotational of non-rigid diatomic molecules	٧
Intensity of rotational spectral lines ,Effect of isotopic subs.	٨
Rotation of polyatomic molecules	٩
I.R.Spectra.Harmonic and an harmonic	١٠
The diatomic of rotational molecules	١١
Vibrational vio-rot.spectru	١٢
Raman Spectra	١٣
Vibrational - rotational of polyatomic molecules	١٤
Infrared and Raman Technique	١٥
Electronic spectra of atom(uv-vis.)	١٦
Shape of atomic orbitals,Atomic am.nu	١٧
Selection rules for an electronic transitions	١٨
H atom spectrum	١٩
Multi-electrons atoms spectrum	٢٠
Electronic angular momentum	٢١
Total angular momentum	٢٢
Fine structure of H-atom spectrum	٢٣
Zeeman effect,Stark effect	٢٤
Electronic spectrum of molecules(uv-vis.)	٢٥
Born-Oppenheimer approx.	٢٦
Chemical analysis by electronic spectroscopy	٢٧
Allowed and forbidden electronic transition,of molecules	٢٨
General view of molecules spectroscopy	٢٩
Absorption-Deactivation	٣٠
Fluorescence and phosphor	٣١
Dissociation energy by spectroscopic method.	٣٢
